Custom Cursor Anki 2.0: how it is put together

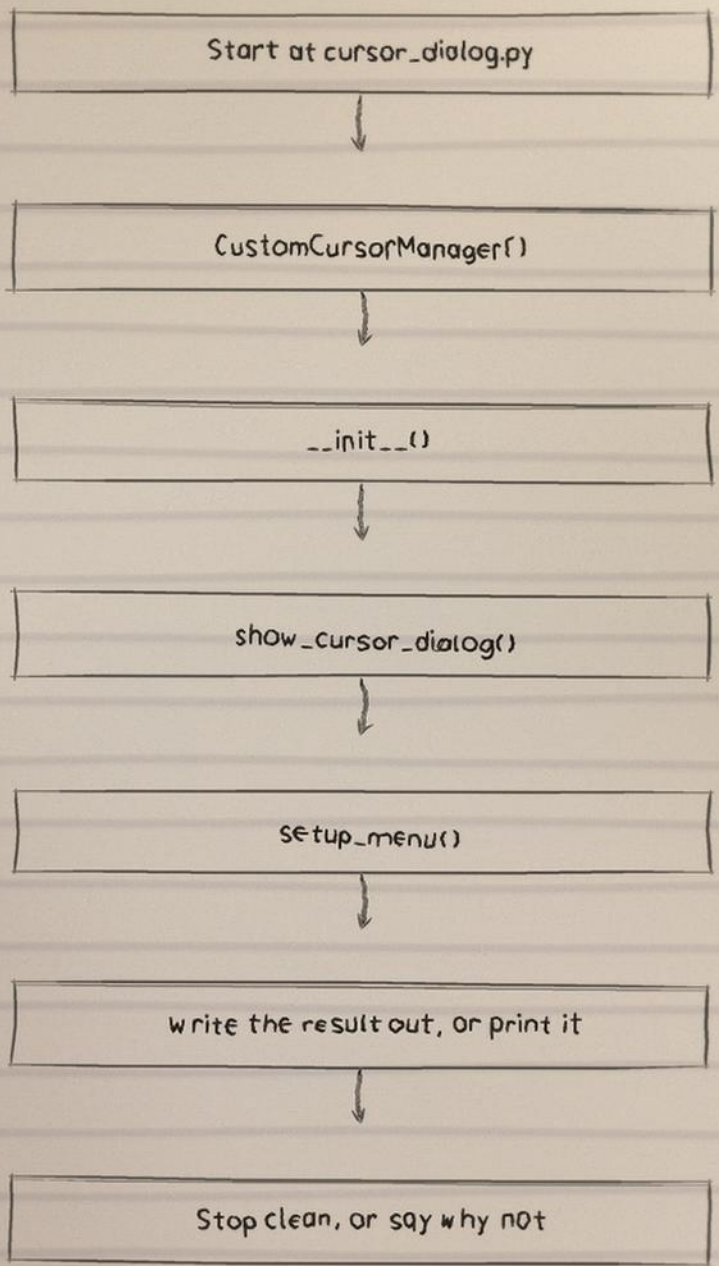

the names doing the work

CustomCursorManager, __init__, show_cursor_dialog
setup_menu, set_cursor, reset_cursor

sketched from the files

Custom Cursor Anki 2.0: the run, step by step

If a step fails, the honest run says so and stops.

traced, not guessed, GK

Product map: what Custom Cursor Anki 2.0 is for

WHAT IT IS

A small project in Python, JSON, Markdown. The README and the files are the whole claim.

WHAT GOES IN

The files at the top of the tree: cursor_dialog.py, __init__.py, manifest.json.

WHAT COMES OUT

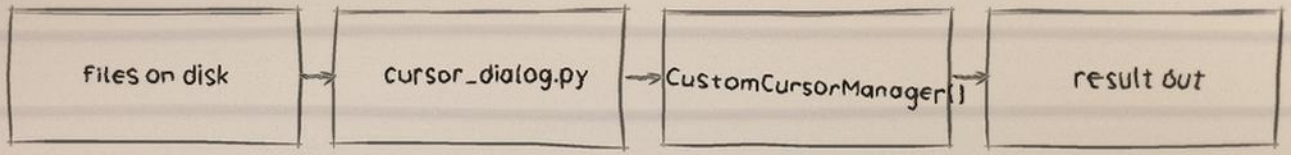

What the top files produce when they run or get read. Nothing else is promised.

WHERE IT STOPS

No service behind it, no account, no upload. If a path is untested, VISUAL.md says so.

mapped by hand, GK

Custom Cursor Anki 2.0: data flow, in one direction

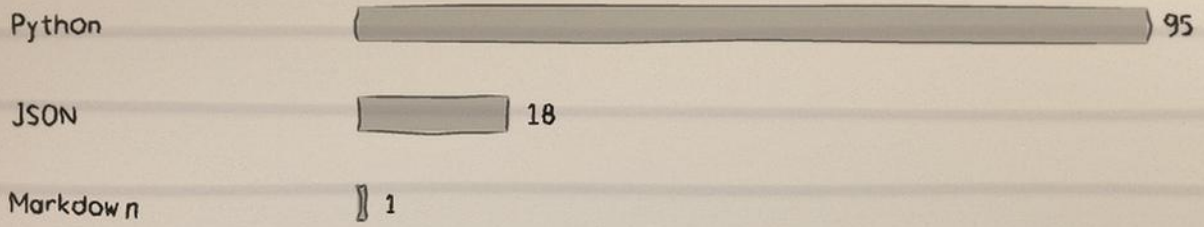

One direction. Anything the code does not do is not drawn.

second sheet, GK

Custom Cursor Anki 2.0 in numbers, counted 2026-10-30

Counted from the local snapshot of this repo. Method for every number: VISUAL.md.

5 files in the tree.
2 commits, first 2025-02-02, last 2025-02-03, from the local git log.
No test files by name in this snapshot.

counted and drawn, BK

Custom Cursor Anki 2.0: schematic of the apparatus

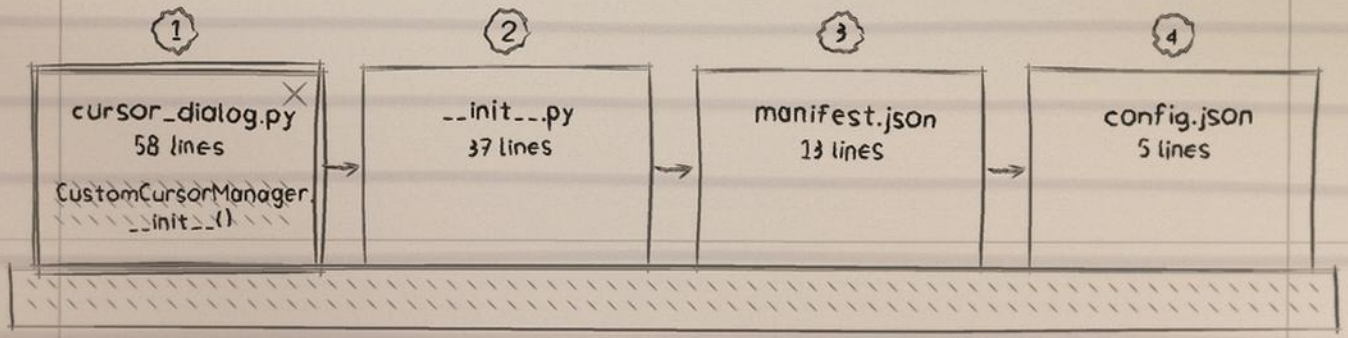

the system as a machine: parts, flow, and measurements

construction lines left in, as drawn

parts list

1. cursor_dialog.py
2. __init__.py
3. manifest.json
4. config.json

in flow order, first to last

base plate: the repo itself, sectioned

span: 5 files, 114 lines counted

turns of the crank so far: 2 commits, 2025-02-02 to 2025-02-03

measured and sketched, CK
